

Compliant by default. Validated before delivery.

E-invoicing rules change several times a year, each change with a binding date. We monitor every update and apply it on time, so your business stays compliant without lifting a finger. Every invoice is automatically validated against the latest official rules before it is issued. Zero maintenance on your side, and zero invoice data retained on ours.

YOU KEEP

✓ Your invoicing system

✓ Your PDF layout

✓ Your delivery process

EVERY INTEGRATION INCLUDES

All European and international formats

Profiles and versions updated automatically

Every invoice validated before delivery

Stateless architecture, zero data retention

01

All European formats

ZUGFeRD, Factur-X, XRechnung, UBL, CII and Peppol BIS, including every profile from MINIMUM to EXTENDED.

PDF/A-3

EXTENDED

02

Validated before delivery

Every document we generate is validated against the official Schematron rules before it is returned. Invalid output never leaves our servers.

Invoice data

From your system

Generate

Your chosen format

Validate

Official Schematron rules

Valid

Returned to you

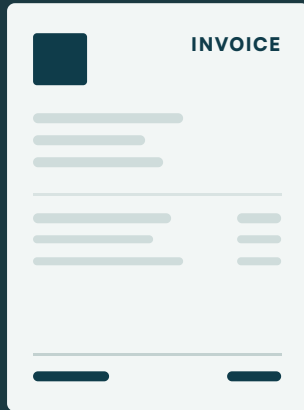

Invalid

Stopped. Validation report returned

03

Your layout, unchanged

We embed the structured XML into your existing PDF. The visible invoice stays exactly as your customers know it, and the result is a compliant PDF/A-3 hybrid.

Your PDF

Your existing layout, as your customers know it

```
<rsm:Invoice>
  <ram:ID>INV-1042</ram:ID>
  <ram:Type>380</ram:Type>
  <ram:Seller>...
  <ram:Buyer>...
  <ram:LineItem>...
  <ram:TaxTotal>...
  <ram:Total>
    1190.00
  </ram:Total>
</rsm:Invoice>
```

Structured XML

Generated by InvoiceXML from your invoice data

Compliant hybrid

Same visible invoice, with the XML embedded

04

Zero maintenance

Standards and validation rules change every year. We track them. Your integration stays the same.

The problem

Regulators publish new rule versions, each with a binding date.

Rule changes, year after year

- 👁 Track every new version
- 📄 Rework mappings and rules
- 🔄 Re-test and redeploy in time

The solution

We monitor the standards and update the rules for you.

Applied by InvoiceXML

- ✓ We track every change
- ✓ We update and test the rules
- ✓ Your integration stays the same

Rule changes become **our problem**, not yours.

05

Data protection and security

Frankfurt, Germany

European Union. All processing and hosting.

EU only

Processed and hosted exclusively in the European Union (Frankfurt, Germany). No data leaves the EU.

Zero retention

Zero retention. Invoice files are processed in memory and never written to storage. We cannot lose what we never store.

No secondary use

Documents are never used for analytics, product development or AI training. Invoice content is used only to generate and validate your document, then discarded.

GDPR and infrastructure

GDPR Article 28 data processing agreement available. Infrastructure provided by DigitalOcean, which holds SOC 2 Type II and ISO 27001 certification for its data centres.
